

# Survey Tips

**The right wall is the wall on your right when you are standing in the cab facing out.**

## Pictures:

The key to a great survey is pictures. You won't need to be a great photographer, but you need to be our eyes and help catch some possible unique features that can be found in cabs. If these features are found we can incorporate them into our design process and eliminate possible frustrations during installs.

**Text Pictures to:  
 315-254-7793  
 Include Job Name**

Look for this circle on your survey sheets - we need pictures of these spots along with photos of each wall.

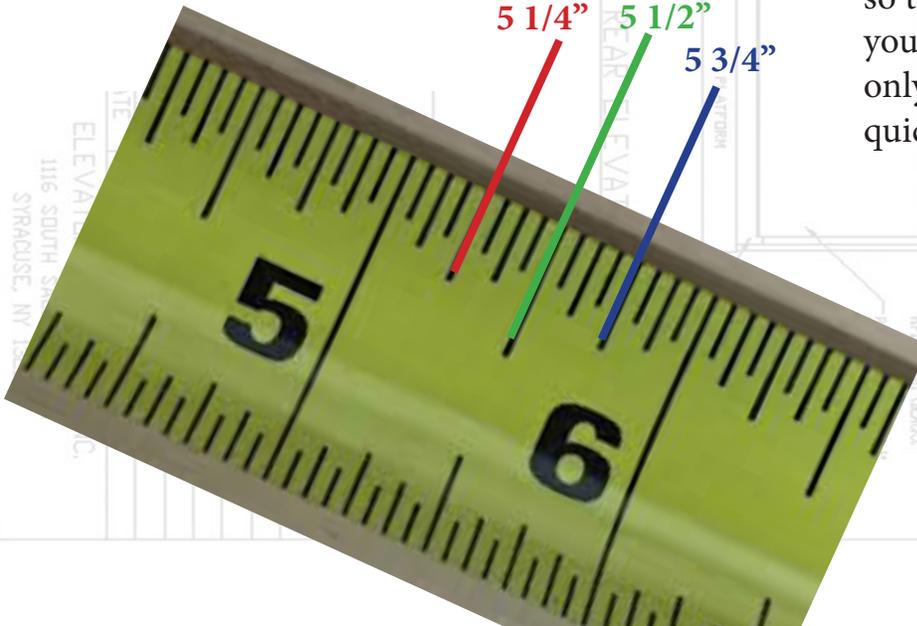

## What to measure?

We are looking for the measurements outlined on the survey sheets. **We want to get the measurements of the cab as if the existing wall panels were removed.** We understand that you can't just remove the panels that are there and measure the cab; that's why we need pictures and measurements done from different parts of the cab.

Write Measurements in Inches

5 1/4" 5 1/2" 5 3/4"

Your goal is to get good measurements of the cab so that we can manufacture your custom interior to not only look great, but to install quickly and with out issue.
