

INTEFLEX™

STACKING MODULAR WALL PANEL SYSTEM

MASON™

The Mason™ design blurs the boundary between practicality and artistry. The upper panels add depth and height while the lower panel acts as a foundation of strength. A flat bar handrail complements the MASON™ design.

A large cab wall length panel sits atop the brushed stainless steel wall base. A narrow cab length panel is placed behind the handrail and serves as a visual boundary between the lower panel and the segmented upper panels. The powder-coated panel reveals help create a stacked block appearance.

Artistic rendering. Actual design is proportionate to cab size. INTEFLEX™ MASON™ with Formica® Patina 8823 laminate on lower panel and 7704 Burnished Glaze 7704 on upper panel. Black powder-coated panel reveals. Recessed stainless steel wall base, cap and wall reveal. Shown with 2" stainless steel flat bar handrail.

Additional MASON™ panel designs and material selections can be seen on our website.
